SQHLRQ - GAGE BRODY

The most common fungal disease affecting the blossoms and fruit of almonds, apricots, cherries, peaches and plums. Brown rot (*Monilinia fructicola*) overwinters in mummified fruit (on the tree and on the ground) and infected twigs. The disease first infects blossoms in spring and grows back into the small branches to cause cankers that can kill stems.

Barn cats: Tips for Success - The Thrifty Homesteader

EPA Region 5: Recycling Trailblazer by Lane W. Ohio. Lane, an 11-year-old from rural Ohio, started recycling paper in his

2nd grade classroom. The following year, with the help of a newly created recycling club, Recycling Trailblazer, he expanded recycling to the entire school.

Dr. Mark is a veterinarian. He has been working with dogs for more than 40 years. Dog waste should be composted, not put into a septic tank; it heats up enough to destroy pathogens and provides nutrients that can be utilized in your yard and under your trees. Composting dog waste also keeps tons of ...

Prune your container grown lime trees. Watch for any suckers that form and immediately prune to not only maintain

the shape of the tree but to keep the growth compact and promote better fruit production. Thin branches to 4-6 inches apart for fewer but larger fruit set, in the latter part of winter.
