«Archeologia Medievale» pubblica contributi originali riguardanti l'archeologia postclassica, la storia della cultura materiale in età pre-industriale e le scienze applicate nella forma di saggi e studi originali; relazioni preliminari di scavo; contributi critici su libri, articoli, ritrovamenti, ecc. Vengono pubblicati sia testi in italiano che in altre lingue.

This book offers a comprehensive review of the biology of snakes, focusing on Italian species. The snakes of Italy belong to the two families Colubridae and Viperidae, and for each species the systematic classification and chorology including distribution maps are presented. Furthermore, readers will learn how to carry out field studies, how to han-

dle snakes and how to photograph them. The book concludes with a chapter on the iconography of historical Italian snakes and their importance in popular science, and one on myths and legends. This SpringerBriefs volume will appeal to herpetologists and technical staff. The section on iconography may also be of interest to museum staff.

The Atlas of Italian Amphibians and Reptiles presents the distribution, ecology and conservation status of the 37 species of amphibians and the 50 species of reptiles found in Italy. A 10x10 km UTM grid map is supplied for each species, on the basis of more than 70.000 records contributed by 900 collaborators during the Societas Herpetologica Italica survey project,

started in 1994. Entries, illustrated with photos, are subdivided into the following headings: taxonomy, general distribution, comments on the distribution map, habitat, altitudinal distribution, annual activity cycle, reproduction and status of the Italian populations. General sections on biogeography, history of herpetology in Italy, pa-

leoherpetology and herpetological fauna of the small Italian islands are also included. Italian and English text.

This book contains the proceedings of the Congress, thus making available the extensive range of research performed and in progress. The contributions, in synthetic form, illustrate the methods and results, with the support

of data, tables and bibliographies, of 35 studies carried out by research teams of biologists from the universities of Roma-Sapienza, Roma Tor Vergata, Florence, Naples, Turin, Milan, Palermo, Genoa, Pisa, Padua, Pavia, Perugia and Calabria, as well as various museums, study centres, reserves and nature parks.
