Teaching how to deal with diving emergencies, this is the British Sub-Aqua Club's standard textbook for divers of all standards. It begins with dive planning and accident prevention, and goes on to explain first aid and the treatment of injuries from burns and broken bones to hypothermia, decompression sickness and shock. A separate section on marine life describes treatment for bites and stings. Major rescue techniques are explained in detail, from towing an unconscious diver in the water to assisted ascents, and from rescuing an injured diver from the depths to landing him on boat or beach. The book also covers rescue management, including the use of rescue equipment and after-care.

Education enables every human to live their best life and to handle different situations that life may present to them. Every individual has the right to get educated. Every person has special skills

and abilities. One only needs to identify and tap into that potential. Some gifted, driven students plan and join courses of their choice. Most students are confused with the number of courses available to them. They are not confident if they are making the right choices or whether they will do well in the course they choose. This book is an attempt to highlight course options for those students who do not take the formal education route like graduation, post-graduation, doctoral programmes or correspondence or open university courses. Such students still have many options open to them. One may have a good voice, love for animals, passion for cooking, an eye to capture the beauty of nature, ability to dance, skills in music, etc. They can all get trained and take up lucrative careers of their choice based on their aptitude. Self-confidence, perseverance, grit, motivation to achieve, and passion are absolutely needed for a student to be successful. Make your choices based on your aptitude and interest. Once you put in the effort from your side, success will follow.

The FAAT List is not designed to be an authoritative source, merely a handy reference. Inclusion recognizes terminology existence, not legitimacy. Entries known to be obsolete are included because they may still appear in extant publications and correspondence.

Divine medicine explained by experts in clear and simple terms and in a very interesting and entertaining manner.

This volume offers new insight into an important and largely under-examined area of marine leisure and tourism: scuba diving tourism. Knowledge of scuba diving has long been hidden among broad discussions of water-based sports and activities and this fo-

cused book aims to shed further understanding and knowledge on this popular international activity. The book examines the current issues central to research into and management of scuba diving Tourism from multidisciplinary perspectives such as health and safety, climate change, policy and regulation and the recreation/leisure context. It further reveals critical management issues of economic, environmental and socio-cultural impacts related to scuba diving tourism which extends to the influence of climate change on the industry's operations and future. This significant volume which conceptualizes the issues surrounding scuba diving tourism now and in the future is written by leading experts in this field and will be valuable reading for all those interested in marine leisure and tourism.

Martyn Farr's *The Darkness Beckons* charts the history and development of cave diving, from early underwater expeditions in

France in the late nineteenth century, through to cutting-edge dives across the globe, where iron-willed individuals are pushing the limits of equipment and techniques in the pursuit of exploration. Cave diving is the natural evolution of caving, where cavers and open-water divers overcome the challenges of water-filled passages by using specialist breathing apparatus to explore further and deeper than ever before. The challenges are many – distance, depth, temperature, visibility, rockfall and simple restriction in passage size – together with the physical and mental demands placed on an individual in an environment where, despite meticulous preparation, equipment can malfunction and one cannot expect to be rescued if something goes wrong. Early cave dives were made using Standard Equipment diving suits, before ‘frogman’ equipment was adopted by British and Italian divers in the 1940s. Around the same time, Jacques-Yves Cousteau and Émile Gagnan designed the compressed-air aqualung, the first scuba equipment. The development of breathing apparatus has continued, alongside solutions to evermore challenging projects, especially those at extreme depth. British cave divers, including the author, have been at the forefront of many developments, such as the explorations at Wookey Hole in the Mendips, Keld Head in the Yorkshire Dales and Pozo Azul in Spain. Cave diving today is a truly international endeavour, and Farr gives detailed and engaging accounts of developments in Europe, the Americas, Australia and New Zealand, Southern Africa and more. Farr introduces cave diving’s pioneers and chronicles their achievements. Among a cast of many are the Britons Graham Balcombe and Mike Boon; the American Sheck Exley, who died while attempting to establish a new depth record in the Zacatón sinkhole in Mexi-

co; and the outstanding German cave diver and equipment innovator Jochen Hasenmayer. The stories of their adventures are charged with courage, danger and excitement, and some have led to tragedy. First published in 1980, this 2017 edition of *The Darkness Beckons* has been fully revised and updated to reflect the latest developments. Featuring over 400 breathtaking photographs and illustrations, and with a foreword by renowned American cave diver and explorer Bill Stone, it is an inspirational read for anyone with an interest in exploration and adventure.

Published by the American Geophysical Union as part of the *Coastal and Estuarine Studies*, Volume 61. The effects of increased at-

mospheric carbon dioxide and related climate change on shallow coral reefs are gaining considerable attention for scientific and economic reasons worldwide. Although increased scientific research has improved our understanding of the response of coral reefs to climate change, we still lack key information that can help guide reef management. Research and monitoring of coral reef ecosystems over the past few decades have documented two major threats related to increasing concentrations of atmospheric CO₂: (1) increased sea surface temperatures and (2) increased seawater acidity (lower pH). Higher atmospheric CO₂ levels have resulted in rising sea surface temperatures and proven to be an acute threat to corals and other reef-dwelling organisms. Short periods (days) of elevated sea surface temperatures by as little as 1–2°C above the normal maximum temperature has led to more frequent and more widespread episodes of coral bleaching—the expulsion of symbiotic algae. A more chronic consequence of increasing atmospheric CO₂ is the lowering of pH of surface waters, which affects the rate at which corals and other reef organisms secrete and build their calcium carbonate skeletons. Average pH of the surface ocean has already decreased by an estimated 0.1 unit since preindustrial times, and will continue to decline in concert with rising atmospheric CO₂. These climate-related Stressors combined with other direct anthropogenic assaults, such as overfishing and pollution, weaken reef organisms and increase their susceptibility to disease.

Divers will learn how to: Buy or rent the best SCUBA equipment at the best prices Plan dives to maximize enjoyment and safety Find great diving sites close to home Master underwater rescue procedures and shore- and night-diving techniques Explore wrecks, reefs, and underwater caves

99 Tips to Get Better at Spearfishing is the ultimate spearfishing book Sourced from 3 years interviewing the worlds best spearos. This guide has one goal, to make you a better a spearo Fully Illustrated with love by some of the worlds best spearfishing photographers as well as submission from the Noob Spearo community 99 Tips is jammed packed with tips, tricks and advice from spearfishing legends like Chris Coates (South Africa), Jim Russell (California), Darren Shields (New Zealand) and many more. This book will teach you something and improve your spearfishing. To bring it all together we recruited the talented Skye Bailey. The Graphic designer behind Spearing Magazine and it looks amazing to say the least. This book was 300% funded on Kickstarter and our earliest unillustrated ebook edition of 99 Tips to Get Better at Spearfishing still rates as one of the most popular spearfishing books on Amazon. Reader Reviews "(99 Tips is) a really good collection of tips for spearfishing. The book is well written and the authors have a good sense of humour that makes it an easy read. I am new to spearfishing and this book has a lot of information that

will help me improve. I have also been working my way through the noobspearo podcast that the authors run, and although it is not necessary to understand the book, I would recommend readers also listen to the podcasts; mainly because they are good both in an informative and entertaining manner. On the podcasts they interview renowned spearfishers and a lot of the tips are direct from their mouths. A lot of the tips are covered in the podcasts but the reason I like this book is it is a concise collection of the best tips from over 40 hours of interviews and triggers my memory of the more in depth discussion on the podcast. Also having the points itemised helps me to pick one or two points I want to work on when I go for a dive rather than trying to work on 10 things at once. Strongly recommend for all spearfishing enthusiasts particularly for those that are newer to the sport." - NJ McKeeon " I was featured in a book, therefore I might be biased, but here is my opinion. The book is a very fine guide to broaden your spearfishing perspective. If you did your research then you know that there is an abundance of other pieces on spearfishing which go into nonsense like 'this is a gun. The gun has a shaft. The shaft flies towards the fish. The fish tries to get away. But here we have something very different. I think the goal of '99 Tips to Get Better At Spearfishing' is to bring to your attention the 'down to earth' knowledge and ideas about spearfishing. Meaningful stuff, something that always affected your dives but you hadn't been paying attention to it up until now. Furthermore, the book defines an interesting 'aura' for your further readings/research. Although the book is aimed at features a wide perspective on spearfishing, it has an inclination towards the ocean hunting. Which, in some cases, might not directly attribute to your (fresh water spearfish-

ing routine) but will give you an insight on what to do in your 'ocean days'. Overall a very interesting read, which could greatly improve your underwater performance." - Anvar Mufazalov " After getting into the Noob Spearo Podcast I bought the 99 Actionable Tips book and have been down here in the sea of Cortez doing some hunting. My bottom times have been way up and I shot my first Pargo! Thanks for the awesome tips and support from down under!!" - Pete Denton Join the free Noob Spearo spearfishing community at noobspearo.com Find Spearfishing 'How To' articles, blogs and podcasts Connect with us on Social.
