Join award-winning author Chris Lynch on a nonstop adventure through a not-so-distant future, where one lone kid has to prove he can be an animal's best friend.

This book concerns a Josephson device for supercomputers which has extremely low heat dissipation (about 10<sup>6</sup> times less than semiconductor devices and 10<sup>3</sup> times less than voltage-based Josephson devices). In the previous book on Quantum Flux Parametrons (QFPs), DC Flux Parametron, the basic device operation are described. This book deals in much greater depth on the problems which are faced by the QFP. The device characteristics are worked out in detail showing clearly the analysis methods used. A new logic gate using the QFP is described with respect to its basic scheme, operation, and ways for forming logic circuits. The problems faced by the basic QFP are much reduced in the new logic gate. As the QFP operates near the Heisenberg and Boltzmann limits for computing devices, we also show the relationship between speed and stability. The book contains the latest analytical results on QFPs. The material presented in the book can be understood with very little mathematical training or knowledge about superconducting physics. It is also self-contained and does not require reading of other material. Most of the device characteristics can be reproduced from the equations given using simple programs. A circuit simulator is not needed except for high speeds when

transient behavior becomes important.

The Intelligence of Dumb Animals Ken Bull Are animals really dumb? I guess it depends on what the definition of dumb is. If dumb means that animals do not make noises, then they are not dumb. If dumb means that animals do not communicate, then they are not dumb. If dumb means that they do not communicate with humans, then there is some doubt, but one might question whether the problem is with the animal or with the human. Certainly they communicate with others of their species and often with other species as well. I think that they can and do communicate with humans. Most of those who read this will know that their pets do communicate with them. A dog or a cat will surely get across that they need to "go out." Dog owners know that dogs learn tricks and perform on command. Cat owners know that cats spend all of their time training their owners. Certainly pets understand human languages. They know when you are unhappy and when you are pleased. Your gruff voice may send them cowering but they know that their careful response to your anger usually will bring forgiveness. The lesser domesticated animals, horses, cows, sheep, goats, dogs, cats and the wild animals as well do respond to humans. They respond to voices and are particularly attentive to body language. Barbara and I own and operate a ranch in Central Texas. Actually, Barbara owns the ranch and I just work here. Truthfully, the ranch owns us. It decides what we will do each day and when we might take a trip or even when we may go to town for more supplies. Invariably, when we leave for a day or two, the bulls will break down a gate and let the herds mix or the horses will get into a wire fence and cut a leg or some cow will get in trouble having a calf. One gets afraid to leave the place. I don't know how the animals know that we are gone but they seem to know. But it's a great life style if you love working with animals. We took over the ranch operations in 1974 and now live in a house on the ranch. We have raised horses, cows, sheep, goats, dogs and cats out here amongst the deer, raccoons, armadillos, opossums, bobcats, coyotes, snakes and mountain lions. Some years we make a little money depending upon the livestock market, the weather and the gov-

ernment. More years than we would like, we end up with little income and chalk it off as another year of great experience and forced intense exercise. Over the years of living and working with animals we have noted that animals are intelligent and far from being dumb. We notice many human traits in animals or perhaps animal traits in humans. They live by a hierarchy. There is a boss cow or boss horse or a boss deer and the others within that herd yield to that hierarchy. There is also a dominance of one animal species over another, including humans. They definitely grieve over the loss of an offspring. Unlike humans, the newly born animals instinctively know to get up, nurse and make their own way. The stories that I document here are actual experiences that Barbara and I have had here on the ranch. A horse that knew to come for our help to rescue her friend, see Chapter 1. A Pyreneese sheep dog that willingly allowed a lost lamb to nurse along with her own pups, see Chapter 4. A cow that led us to her calf that had drowned shortly after birth, see Chapter 2. Many other examples of animal intelligence are documented in this book. We love the animals and believe that we are not alone. Most mom and pop ranching families are in business because they love animals and love the ranch way of life. We know that they do not stay in the ranching business because of profit. The ever-increasing cost of operations has long ago taken the profit from ranching. America owes a lot to small agriculture operations because these small ag businesses have kept the cost of food and fiber reasonable for the American families. Contrary to the belief of some folks in the cities, food does

Siblings Maddie and Atticus love living by the sea. Their dad traps lobsters off the coast of Maine. They love helping with the family business and volunteering at the local aquarium. How will the kids use their knowledge of animals and their awesome problem-solving skills to help the dolphin family get safely back to sea? NEW YORK TIMES BESTSELLER • A “thrilling” (The New York Times), “dazzling” (The Wall Street Journal) tour of the radically different ways that animals perceive the world that will fill you with wonder and forever alter your perspective, by Pulitzer Prize-winning science journalist Ed Yong “One of this year’s finest works of narrative nonfiction.”—Oprah Daily ONE OF THE TEN BEST BOOKS OF THE YEAR: The Wall Street Journal, The New York Times, Time, People, The Philadelphia Inquirer, Slate, Reader’s Digest, Chicago Public Library, Outside, Publishers Weekly, BookPage ONE OF THE BEST BOOKS OF THE YEAR: Oprah Daily, The New Yorker, The Washington Post, The Guardian, The Economist, Smithsonian Magazine, Prospect (UK), Globe & Mail, Esquire, Mental Floss, Marginalian, She Reads, Kirkus Reviews, Library Journal The Earth teems with sights and textures, sounds and vibrations, smells and tastes, electric and magnetic fields. But every kind of animal, including humans, is enclosed within its own unique sensory bubble, perceiving but a tiny sliver of our immense world. In *An Immense World*, Ed Yong coaxes us beyond the confines of our own senses, allowing us to perceive the skeins of scent, waves of electromagnetism, and pulses of pressure that surround us. We encounter beetles that are drawn to fires, turtles that can track the Earth’s magnetic fields, fish that

fill rivers with electrical messages, and even humans who wield sonar like bats. We discover that a crocodile's scaly face is as sensitive as a lover's fingertips, that the eyes of a giant squid evolved to see sparkling whales, that plants thrum with the inaudible songs of courting bugs, and that even simple scallops have complex vision. We learn what bees see in flowers, what songbirds hear in their tunes, and what dogs smell on the street. We listen to stories of pivotal discoveries in the field, while looking ahead at the many mysteries that remain unsolved. Funny, rigorous, and suffused with the joy of discovery, *An Immense World* takes us on what Marcel Proust called "the only true voyage . . . not to visit strange lands, but to possess other eyes." While Human-Animal Studies is a rapidly growing field in modern history, studies on this topic that focus on the Ancient World are few. The present volume aims at closing this gap. It investigates the relation between humans, animals, gods, and things with a special focus on the structure of these categories. An improved understanding of the ancient categories themselves is a precondition for any investigation into the relation between them. The focus of the volume lies on the Ancient Near East, but it also provides studies on Ancient Greece, Asia Minor, Mesoamerica, the Far East, and Arabia.

*Unfortunate Destiny* focuses on the roles played by nonhuman animals within the imaginative thought-world of Indian Buddhism, as reflected in pre-modern South Asian Buddhist literature. These roles are multifaceted, diverse, and often contradictory: In Buddhist doctrine and cosmology, the animal rebirth is a most "unfortunate destiny" (*durgati*), won through negative karma and characterized by a lack of intelligence, moral agency, and spiritual potential. In stories about the Buddha's previous lives, on the other hand, we find highly anthropomorphized animals who are wise, virtuous, endowed with human speech, and often critical of the moral shortcomings of humankind. In the life-sto-

ry of the Buddha, certain animal characters serve as "doubles" of the Buddha, illuminating his nature through identification, contrast or parallelism with an animal "other." Relations between human beings and animals likewise range all the way from support, friendship, and near-equality to rampant exploitation, cruelty, and abuse. Perhaps the only commonality among these various strands of thought is a persistent impulse to use animals to clarify the nature of humanity itself--whether through similarity, contrast, or counterpoint. Buddhism is a profoundly human-centered religious tradition, yet it relies upon a dexterous use of the animal other to help clarify the human self. This book seeks to make sense of this process through a wide-ranging-exploration of animal imagery, animal discourse, and specific animal characters in South Asian Buddhist texts.

When Animal returns to Harlem, he is captured by Shai Clark and sentenced to death by the crime boss, only to discover that the executioner is actually his missing father, and the two band together to defeat a common enemy.
