Simulation offers a flexible way to study the iSCSI-based storage system. In this paper, we present a simulation work of iSCSI-based storage system based on ns2. The storage system consists of an iSCSI gateway with multiple targets, a number of storage devices that are connected to the storage router through FC-AL and clients, which access the target through iSCSI protocol.

Lu et al. [4] [12] accomplished a simulation study of an iSCSI-based storage system with the network simulator ns-2. Their study also includes the performance variance of iSCSI in a simulation setting while varying PDU size, TCP Maximum Segment Size (MSS), and TCP window size.

In this paper, discrete-event simulation is used to evaluate the performance of a cluster-based hypercube architecture running parallel simplex and parallel Gaussian elimination algorithms. The cluster-based hypercube architecture enhances the performance of the nodes of the existing hypercube architecture systems by incorporating in each node, a cluster of n execution processors connected ...

Phase II. Five associate degree and five baccalaureate programs were selected based on an application process and the ability to meet study eligibility criteria. In August 2011, new nursing students in those programs were randomized to one of three study groups: clinical as usual (control), 25% simulation or 50% simulation.

SIMULATION-BASED LEARNING. Full-body mannequin simulators originated in the field of anesthesia in the late 1960s, based on work done by Denson and Abrahamson from the University of Southern California. This model was known as 'Sim One' and was used for training in endotracheal intubation and induction of anesthesia.
