A software requirements document (also known as software requirements specifications) is a document that describes the intended use-case, features, and challenges of a software application. These documents are created before the project has started development in order to get every stakeholder on the same page regarding the software's functionality.

The majority of 'techies' working in software often put off software documentation as they may find it to be complex, time-consuming, unnecessary, an extra expense, or straight-up boring. However, software documentation is a critical part of a software development lifecycle and must be carried out to create a full-fledged and highly reputable piece of software.
