A constant, such pi, that may be defined by the integral of an algebraic function over an algebraic domain is known as a period. The following is a list of the most common definite Integrals. For a list of indefinite integrals see List of indefinite integrals

The Table of Integrals, Series, and Products is the major reference source for integrals in the English language.It is designed for use by mathematicians, scientists, and professional engineers who need to solve complex mathematical problems.

An even larger, multivolume table is the Integrals and Series by Prudnikov, Brychkov, and Marichev (with volumes 1-3 listing integrals and series of elementary and special functions, volume 4-5 are tables of Laplace transforms). More compact collections can be found in e.g.
