How to build an agile-friendly test automation framework ...

We need to specify in and out of our Test Automation Framework such as programming language used, Type of framework used, Test Base Class (Initializing WebDriver, Implicit Waits), How we separate Element locators and tests (Page Objects, Page Factory), Utility functions file, Property files, TestNG annotations, How we parameterize tests using Excel files, How we capture error screenshots, Generating reports(Extent Reports), Emailing reports, Version Control System used and Continues ...

Design For Test Automation - SourceForge

Keyword-Driven Automation Framework • Requires the development of data tables and keywords, independent of the test automation tool. • Essentially represents a manual test case as a series of keywords or actions.

Test automation is a fulltime effort, not a sideline. The test design and the test framework are totally separate entities. The test framework should be application-independent. The test framework must be easy to expand, maintain, and perpetuate. The test strategy/design vocabulary should be framework independent.

Looking for Hybrid Automation Framework Design document ...

This hybrid test automation framework is what most frameworks evolve into over time and multiple projects. Maximum industry uses Keyword Framework in a combination of Function decomposition method. PS: Other Frameworks worth a mention are Test Modularity Framework. In this framework, a common task in test script are grouped together as Modules.

How To Design An Effective Test Automation Framework ...

What is a test automation framework? A test automation framework is an application that allows you to write a series of tests without worrying about the constraints or limitations of the underlying test tools

Selenium Automation Framework (SAF).

There are many reasons why test automation initiatives fall short, but the main reason is a poorly designed architecture for the framework on which the automation was built. Test automation is living, breathing code, and is developed to provide sanity checks for ever-changing production code. When viewed in that context, it is obvious that test automation code must be reliable, and therefore should be developed with a comparable standard to that which is being shipped.

During development, we could have design-specific documentation, to show the architecture of the framework we are developing. On the first iteration when the framework is shippable, it might be required to include the Scripting Manual. In our case, shippable will mean Testers can start making use of the framework to write scripts to test the AUT.

The library architecture framework for automated testing is based on the modular framework, but has some additional benefits. Instead of dividing the application under test into the various scripts that need to be run, similar tasks within the scripts are identified and later grouped by function, so the application is ultimately broken down by common objectives.

Test Automation Frameworks - SmartBear Software

The testing frameworks are a vital part of every successful automated testing process. They decrease maintenance expenses and testing trials and will implement a higher ROI for analysis teams looking to optimize their development processes. Below are the key benefits of creating an automation framework:
