Mariale Hardiman's Brain-Targeted Teaching Model

The Brain-Targeted Teaching (BTT) model (16, 17) is a pedagogical framework that seeks to bridge research and practice by providing educators with a cohesive, usable model of effective instruction informed by findings from the neuro- and cognitive sciences. The BTT model is neither a marketed product nor a curriculum. Brain Targeted Teaching Model Overview provides an overview of Brain Targeted Teaching by Dr. Hardiman as well as insights from educators who have successfully imple-

mented the Brain Targeted Teaching model.

The Brain-Targeted Teaching model is an excellent pedagogical framework that connects neurosciences and education in a manner that is easily comprehended and quickly adaptable for the classroom teacher who wants an understanding of the metagognition of the lesson units planned for their students.
