### Consumption of alcohol and blood pressure: Results of the ...

### Blood alcohol levels in road traffic accidents: Factors ...

The relationship between number of beers consumed ( $x$ ) and blood alcohol content ( $y$ ) was studied in 16 male college students by using least squares regression. The following regression equation was obtained from this study:  $\hat{y} =$

$-0.0127 + 0.0180x$  The above equation implies that: each beer consumed increases blood alcohol by .0127 on average it takes 1.8 beers to increase blood alcohol content by .01 After consuming 1 beer, blood alcohol equals .0180. each beer consumed increases blood ... While the relationship between alcohol and high blood pressure can be a positive one when drinking is light to moderate, what about heavy drinking? If you drink too much, it can have quite the opposite effect and raise your blood pressure. If you're a heavy drinker and you gradually cut back on alcohol, you can lower your blood pressure significantly in many cas-

es. If you're a long-term heavy drinker and you stop suddenly, it can cause a spike in blood pressure.

### The relationship between blood alcohol concentration (BAC ...

This report concerns the relationship between blood-alcohol concentration (BAC) and breath-alcohol concentration (BrAC), and observations about the blood/breath ratio (B-BR) of alcohol. This...

Blood alcohol levels in road traffic accidents: Factors associated and the relationship between history of alcohol consumption and blood alcohol level detection. Prabhakar Abhilash KP(1), Lath D(2), Kowshik J(1), Jose A(2), Chandy GM(1). Author in-

formation: (1)Department of Emergency Medicine, Christian Medical College, Vellore, Tamil Nadu, India. Although overall, level of education was associated with alcohol consumption at time of injury, this relationship was not a simple one, with the highest rates of (+) BAC being found among those having completed high school; those with lower or higher levels of education had similarly lower rates.

Background: Alcohol contributes to morbidity and mortality in trauma patients. Alcohol abuse is a leading risk factor for preventable death. This project aims to determine if a

relationship exists between trauma outcomes and higher blood alcohol content (BAC) in patients. Thursday 07 November, 2013. There are strong evidence that there exist a correlation factor of 2100/1 between Blood Alcohol Contents (BAC) and the Breath Alcohol contents (BrAC). To obtain an accurate correlation the (BAC) and BrAC, a deep lungs breath samples are required.

Background: Policies that establish maximum blood alcohol concentrations (BACs) or breath alcohol concentration (BrACs) for drivers while driving can reduce traffic accidents by approximately 20%. In Brazil, the National Transit Council (CONTRAN) considers positive BAC and/or BrAC tests or signs of psychomotor capacity alterations as evaluated by a police authority to be an administrative infraction or even a crime.
