The Shallows: What the Internet Is Doing to Our Brains by Nicholas Carr. Print. The Essence. As history shows, various tools that we humans use to extend our mental faculties greatly change the way we then navigate our realities. However, this time, costs run high. Using the internet has ramifications on our brains that are consistently underplayed.

In stark contrast, the Internet encourages the rapid, distracted sampling of small bits of information from many sources. Its ethic is that of the industrialist, an ethic of speed and efficiency, of optimized production and consumption—and now the Net is remaking us in its own image.

Analysis Carr opens The Shallows with his personal reason for writing the book. In 2007, after a decade of using the Web and believing it a great boon for his intelligence, Carr had an epiphany: the benefits of the Internet may come at a price. Carr found he could no longer focus like he used to on long pieces of writing.

The Internet provides such a feast of distraction that no energy is left for the parts of our brains responsible for complex thought and developing subtle human emotions. The great warning presented by The Shallows is not only that the Internet is changing our brains but that it may be diminishing the very skills and traits that make us human.
