54WIWQ - ISIAH JAYLEEN

The economic literature contained an apparently coherent view of the nature of the pollution problem together with a compelling set of implications for public policy. In short, economists saw the problem of environmental degradation as one in which economic agents imposed external costs upon society at large in the form of pollution.

Methods based on economic theory have been devised to assign
 monetary values to environmental goods and services, and these
 values can then be incorporated into decision-making at the pro-
 ject, sectoral and national levels.

General principles. EU environment policy rests on the principles
 of precaution, prevention and rectifying pollution at source, and
 on the 'polluter pays' principle. The precautionary principle is a
 risk management tool that may be invoked when there is scien-
 tific uncertainty about a suspected risk to human health or to the
 environment emanating from a certain action or policy.

The principal forms of non-price policy instruments used for envi-
 ronmental protection are mandates and bans. Mandates require
 that individuals or firms adopt a particular technology or produc-
 tion process to decrease the negative externalities produced
 from individual or firm activity.

Theory of Sustainability. Sustainability describes a form of econo-
 my and society that is lasting and can be lived on a global scale.
 The society-changing potential of the claim: 'More justice be-
 tween generations, more global justice - at the same time' faces
 the peril of getting out sight. Sustainability is just not the trivial
 general claim to take social, economic and environmental policy

Environmental policy is made in a context of both market failure and government failure. On the one hand, leaving environmental protection to the free market, relying on notions of corporate social responsibility and altruistic consumer and shareholder preferences, will not deliver optimal results.
