The second edition of this hugely successful textbook provides comprehensive coverage of a wide range of topics in theoretical and applied linguistics. Written by leading academics in the field, this text offers a firm grounding in linguistics and includes engaging insights into current research. It covers all the key areas of linguistic analysis, including phonetics, morphology, semantics and pragmatics, and core domains of study, comprising the history of the English language, regional and social variation, style and communication and interaction. Fresh material on research methods outlines key areas for consideration when carrying out a research project, and provides students with the framework they need to investigate linguistic phenomena for themselves. This is an invaluable resource for both undergraduate and postgraduate students on English language and linguistics degree programmes. New to this Edition: - Seven new chapters covering topics such as second language acquisition, corpus linguistics and research methods - A number of chapters have been substantially revised, including those on World Englishes, Literacies in Cyberspace and TEFL, TESOL and Linguistics - Fully updated throughout to reflect the latest advances in the field

Deixis as a field of research has generated increased interest in recent years. It is crucial for a number of different subdisciplines: pragmatics, semantics, cognitive and contrastive linguistics, to name just a few. The subject is of particular interest to experts and students, philosophers, teachers, philologists, and psychologists interested in the study of their language or in comparing linguistic structures. The different deictic structures – not only the items themselves, but also the oppositions between them – reflect the fact that neither the notions of space, time, person nor our use of them are identical cross-culturally. This diversity is not restricted to the difference between languages, but also appears among related dialects and language varieties. This volume will provide an overview of the field, focusing on Romance languages, but also reaching beyond this perspective. Chapters on diachronic developments (language change), comparisons with other (non-)European languages, and on interfaces with neighboring fields of interest are also included. The editors and authors hope that readers, regardless of their familiarity with Romance languages, will gain new insights into deixis in general, and into the similarities and differences among deictic structures used in the languages of the world.

The volume explores the relationship between religion and violence in Europe from the Middle Ages to the Early modern period, involving European and Japanese scholars. It investigates the ideological foundations of the relationship between violence and religion and their development in a varied corpus of sources (political and theological treatises, correspondence of missionaries, pamphlets, and images).

How many excuses are there for not doing homework? Let us count the ways: Giant lizards invaded the neighborhood. Elves hid all the pencils. And then there was that problem with carnivorous plants.... The excuses go on and on, each more absurd than the next and escalating to hilarious heights. Featuring detail-rich illustrations by Benjamin Chaud, this book is guaranteed to amuse kids and their parents, not to mention anyone who has experienced a slacker student moment—and isn't that everyone? Plus, this is the fixed format version, which will look almost identical to the print version. Additionally for devices that support audio, this ebook includes a read-along setting.

In works by filmmakers from Bertolucci to Spielberg, debauched images of nazi and fascist eroticism, symbols of violence and immorality, often bear an uncanny resemblance to the images and symbols once used by the fascists themselves to demarcate racial, sexual, and political others. This book exposes the "madness" inherent in such a course, which attests to the impossibility of disengaging visual and rhetorical constructions from political, ideological, and moral codes. Kriss Ravetto argues that contemporary discourses using such devices actually continue unacknowledged rhetorical, moral, and visual analogies of the past. Against postwar fictional and historical accounts of World War II in which generic images of evil characterize the nazi and the fascist, Ravetto sets the more complex approach of such filmmakers as Pier Paolo Pasolini, Liliana Cavani, and Lina Wertmuller. Her book asks us to think deeply about what it means to say that we have conquered fascism, when the aesthetics of fascism still describe and determine how we look at political figures and global events. Latin books are among the most numerous surviving artifacts of the Late Antique, Mediaeval, and Renaissance periods in European history; written in a variety of formats and scripts, they preserve the literary, philosophical, scientific, and religious heritage of the West. The Oxford Handbook of Latin Palaeography surveys these books, with special emphasis on the variety of scripts in which they were written. Palaeography, in the strictest sense, examines how the changing styles of script and the fluctuating shapes of individual letters allow the date and the place of production of books to be determined. More broadly conceived, palaeography examines the totality of early book production, ownership, dissemination, and use. The Oxford Handbook of Latin Palaeography includes essays on major types of script (Uncial, Insular, Beneventan, Visigothic, Gothic, etc.), describing what defines these distinct script types, and outlining when and where they were used. It expands on previous handbooks of the subject by incorporating select essays on less well-studied periods and regions, in particular late mediaeval Eastern Europe. The Oxford Handbook of Latin Palaeography is also distinguished from prior handbooks by its extensive focus on codicology and on the cultural settings and contexts of mediaeval books. Essays treat of various important features, formats, styles, and genres of mediaeval books, and of representative mediaeval libraries as intellectual centers. Additional studies explore questions of orality and the written word, the book trade, glossing and glossaries, and manuscript cataloguing. The extensive plates and figures in the volume will provide readers with clear illustrations of the major points, and the succinct bibliographies

in each essay will direct them to more detailed works in the field.

Our natural world has been irretrievably altered by humans, for humans. From domesticated wheat fields to nuclear power plants and spacecraft, everything we see and interact with has in some way been changed by the presence of our species, starting from the Neolithic era so many centuries ago. This book provides a crash course on the issues and debates surrounding technology's shifting place in our society. It covers the history of our increasingly black-box world, which some theorize will end with technology accelerating beyond our understanding. At the same time, it analyzes competing trends and theories, the lack of scientific knowledge of large sections of the population, the dogmas of pseudoscience, and the growing suspicion of science and technology, which may inevitably lead to scientific stagnation. What will the future of our civilization look like? How soon might scientific acceleration or stagnation arrive at our doorstep, and just how radically will such technological shifts change our culture? These are issues that we must address now, to insure our future goes the way we choose.

A presentation of the main concepts, works and authors of the Spanish Universalist School, the most fundamental Spanish and Hispanic contribution, recently reconstructed, to the European Enlightenment.

For generations, early Franciscan thought has been widely regarded as unoriginal: a mere attempt to systematize the longstanding intellectual tradition of Augustine in the face of the rising popularity of Aristotle. This volume brings together leading scholars in the field to undertake a major study of the major doctrines and debates of the so-called Summa Halensis (1236-45), which was collaboratively authored by the founding members of the Franciscan school at Paris, above all, Alexander of Hales, and John of La Rochelle, in an effort to lay down the Franciscan intellectual tradition or the first time. The contributions will highlight that this tradition, far from unoriginal, laid the groundwork for later Franciscan thought, which is often regarded as formative for modern thought. Furthermore, the volume shows the role this Summa played in the development of the burgeoning field of systematic theology, which has its origins in the young university of Paris. This is a crucial and groundbreaking study for those with interests in the history of western thought and theology specifically.

La fisica spiega il funzionamento della Natura a ogni livello, dall'immensità dell'Universo alle particelle subatomiche, e le sue leggi si possono tradurre anche in formule di comportamento nelle relazioni interpersonali. L'autore conduce in un viaggio dell'intelletto fra concetti che raramente sono stati accostati: la metrica dei comportamenti umani, il principio di azione e reazione nelle relazioni interpersonali, la termodinamica degli esseri umani, le leggi della dinamica e le interazioni tra le persone. Il libro si rivolge a chiunque gestisca rapporti umani, ovvero tutti, negli ambiti familiari, lavorativi e sociali; e racconta come, a fronte del nostro sforzo di coltivare una dimensione "tecnica" e psicologica nei rapporti umani, la nostra natura – o meglio la Natura, di cui facciamo parte – ci mostra qualche scorciatoia per capire meglio noi stessi e gli altri.

This book is open access under a CC BY 4.0 license "Francesca Billiani and Laura Pennacchiotti draw brilliantly and with precision the evolution of the new architecture and of the national novel (with insights on translations of international novels), whose profiles had been shaped from different angles, especially in the 1930s. These two fields, apparently so distant one from the other, had never been analysed in parallel. This book does this and uncovers several points of contact between the two, spanning propaganda and theoretical turning points." —Chiara Costa and Cornelia Mattiacci, Fondazione Prada, Italy "This book shows convincingly how the arte di Stato during Fascism was created with the morality of a new novel as well as architecture. It is surprising to read how one of the representatives of State art, Giuseppe Bottai, is also one of the finest critics of realist novels and rationalist architecture. More than parallel endeavours, the system of the arts during the Fascist regime should be viewed as a series of intersections of cultural, political and aesthetic discourses." —Monica Jansen, Utrecht University, The Netherlands Architecture and the Novel under the Italian Fascist Regime discusses the relationship between the novel and architecture during the Fascist period in Italy (1922-1943). By looking at two profoundly diverse aesthetic phenomena within the context of the creation of a Fascist State art, Billiani and Pennacchiotti argue that an effort of construction, or reconstruction, was the main driving force behind both projects: the advocated "revolution" of the novel form (realism) and that of architecture (rationalism). The book is divided into seven chapters, which in turn analyze the interconnections between the novel and architecture in theory and in practice. The first six chapters cover debates on State art, on the novel

and on architecture, as well as their historical development and their unfolding in key journals of the period. The last chapter offers a detailed analysis of some important novels and buildings, which have in practice realized some of the key principles articulated in the theoretical disputes. Francesca Billiani is Senior Lecturer in Italian Studies and Director of the Centre for Interdisciplinary Research in the Arts and Languages at the University of Manchester, UK. Laura Pennacchiotti is Research Associate in Italian Studies at the University of Manchester, UK.

This is the first comprehensive International Handbook on the History of Mathematics Education, covering a wide spectrum of epochs and civilizations, countries and cultures. Until now, much of the research into the rich and varied history of mathematics education has remained inaccessible to the vast majority of scholars, not least because it has been written in the language, and for readers, of an individual country. And yet a historical overview, however brief, has become an indispensable element of nearly every dissertation and scholarly article. This handbook provides, for the first time, a comprehensive and systematic aid for researchers around the world in finding the information they need about historical developments in mathematics education, not only in their own countries, but globally as well. Although written primarily for mathematics educators, this handbook will also be of interest to researchers of the history of education in general, as well as specialists in cultural and even social history.

The twentieth century saw a proliferation of media discourses on colonialism and, later, decolonisation. Newspapers, periodicals, films, radio and TV broadcasts contributed to the construction of the image of the African "Other" across the colonial world. In recent years, a growing body of literature has explored the role of these media in many colonial societies. As regards the Italian context, however, although several works have been published about the links between colonial culture and national identity, none have addressed the specific role of the media and their impact on collective memory (or lack thereof). This book fills that gap, providing a review of images and themes that have surfaced and resurfaced over time. The volume is divided into two sections, each organised around an underlying theme: while the first deals with visual memory and images from the cinema, radio, television and new media, the second addresses the role of the printed press, graphic

novels and comics, photography and trading cards.

An interdisciplinary approach, crucial as it is in most fields of research, proves itself to be unescapable in the study of interactions between the ancient Armenian and Greek worlds and literatures. The volume arises from such an awareness and collects papers presented in a conference which has been organized in 2013 at the University of Genova, thanks to a cooperation with the Université Paris-Sorbonne, following in the footsteps of a tradition inaugurated by Giancarlo Bolognesi in the years '80 and '90. The subject is explored from many points of view: the topic of Armenian translations of Greek texts – with considerations of a methodological nature and the discussion of case-studies –, aspects which pertain to the historical context and the historiographical sources, the wide theme of the Armenian reception of Biblical, Christian and Byzantine literature, and finally philological, linguistic and lexical problems. The aim of this kind of research is to exploit the cooperation among classical philologists, linguists and Armenologists, in order to face the challenge of investigating a subject which requires many different competences.

This book examines the creative exchanges between architects, artists and intellectuals, from the Early Renaissance to the beginning of the Enlightenment, in the forging of relationships between architecture and emerging concepts of language in early modern Italy. The study extends across the spectrum of linguistic disputes during this time – among members of the clergy, humanists, philosophers and polymaths – on issues of grammar, rhetoric, philology, etymology and epigraphy, and how these disputes paralleled and informed important developments in architectural thinking and practice. Drawing upon a wealth of primary source material, such as humanist tracts, philosophical works, architectural/antiquarian treatises, epigraphic/philological studies, religious sermons and grammaticae, the book traces key periods when the emerging field of linguistics in early modern Italy impacted on the theory, design and symbolism of buildings.

The anatomy theater is where students of the human body learn to isolate structures in decaying remains, scrutinize their parts, and assess their importance. Taking a new look at the history of anatomy, the author places public dissections alongside private ones to show how the anatomical theater was both a space of philosophical learning and a place where students learned to behave in a civil manner towards their teachers, their peers, and the corpse.
