This story is intended to speculate and look deep into the "other realm." The subject matter within this book will touch the topic of ghosts and paranormal activities; philosophy; multi-cultural religion through historical myths and records; quantum physics in relation to the study of condensates; spiritual beliefs founded by psychology; while also touching the topic of anthropology in terms of the history of man. In addition, we will be discussing how all of this is currently connected to a geographical destination that exists today. We will discuss topics that some people believe, and others do not. Some topics may be so fresh and new, difficulty may be found in believing any of it! In any event, the simple idea of all of these ideals coming together is extremely phenomenal and even entertaining - even if you are not a believer. Perhaps it will open new doors and make room for the exchanging of new ideas? Perhaps even you will be affected?"In addition: the main purpose of this book is to prove that angels exist, and separately, that messages are physically appearing in our landscape today that symbolizes the Apocalypse is coming - all with the use of photographic evidence to support these beliefs.

A book about wikis! That's what people need. Because with wiki technology, lots of people can freely work - gether - they can even generate very large works in the intellectual realm. See for yourself: Today, we still marvel at our massive church buildings, each c- structed over a period of centuries, requiring an immense amount of labor and often bearing the cultural stamp of all of the epochs during which it was created. Someone just has to begin by placing stone upon stone and motivate the people nearby to help out a bit. In places where such enthusiastic fellow men and women lend a hand and donate materials, great things can emerge. And where they are absent? Either scant ruins remain, or the iron will of a pharaoh is - quired, an army of drivers, the sweat of a people and a mountain of gold. Great things can also be created in that way - take the Py- mids: a clear concept, no blending of styles, pure will. Those are two very different paths. The one entails passionate people devotedly building something together for the common good; the other: a single will manages a variety of resources to achieve a set goal. Wikis are tools with which lots of people with a minimum of - ganization, planning, money and time can create something together and communicate with each other from several scattered computers or over the Internet.
