In an equation, essentially you're equating two expressions. The important thing to take away from here is that a variable can take on different values depending on the context of the problem. And to hit the point home, let's just evaluate a bunch of expressions when the variables have different values.

### **Variables, expressions, & equations (video) | Khan Academy**

Some of the topics include linear equations, linear inequalities, linear functions, systems of equations, factoring expressions, quadratic expressions, exponents, functions, and ratios.

### **What are variables, expressions, and equations? | Introduction to algebra | Algebra I | Khan Academy**

We will now equate two algebraic expressions and think about how it might constrain what value the variables can take on. The algebraic manipulation you learn here really is the heart of algebra. Learn for free about math, art, computer programming, economics, physics, chemistry, biology, medicine, finance, history, and more.
