Veritas Cluster Server cluster components

the cluster use IPv6 addresses, you must specify the DNS server IP, either in the network adapters settings or in the Lanman agent's Additional DNS Servers attribute. If you plan to use Fibre Channel (FC) for connecting the LUNs, type `hba_info` on the command prompt, and verify that the FC initiators are displayed. If FC initiators are not displayed, install the miniport driver provided by your vendor and run the command again to verify that the FC initiators are displayed.

Veritas™ Cluster Server Installation and Upgrade Guide

18 Introducing Veritas Cluster Server Can my application be clustered? Can my application be clustered? Most applications can be placed under cluster control provided the following guidelines are met: Defined start, stop, and monitor procedures. Ability to restart in a known state. Ability to store required data on shared disks.

Veritas Cluster Server Administrator's Guide

In a cluster, two or more servers (called nodes) are linked in a

network. These servers run the cluster software that allows each node access to the shared disks. If a node becomes unavailable, cluster resources migrate to an available node (this process is called failover). The shared disks and the virtual server are kept available.
