Web Api Design Pearson Developers The most common way that API developers express relationships is to expose database keys, or proxies for them, in the fields of the entities they expose. However, at least for web APIs, that...

Use a Proven RESTful API RESTful style API design has some nature advantage, for example, by using HTTP to reduce the coupling of clients and has very good openness. So more and more developers use...

A RESTful design improves API performance, reduces development efforts and decreases the necessary operational support through the development of web applications, web services and web APIs. With proven RESTful constraints, teams may create scalable, omnipresent, prolific systems. REST requires a new development mentality, which is why many API implementations are not really based on REST constraints or principles, nor do they fulfil scalability, upgradeability and interoperability expectations.
