The UI Checklist is a shortlist of the most relevant and easy to apply Eclipse User Interface Guidelines. Start by using this list, referring to the linked guideline items for details, then use the Full Checklist for additional guidance. For comments please use bug 205326. Introduction. This document defines the Eclipse user interface guidelines.

Design - Apple Developer

A user interface should be consistent across all parts of the application, from navigation to color to terminology. This is known as internal consistency. But a user interface should also be consistent within its context, such as the operating system or other applications in its group or family. Sign into the UserWeb, Epic's website for end-users.

7 User Interface Design Guidelines For Web Applications ...

These guidelines provide specs and usage

of UI components that display on interface and a user interacts with them. UI components include standard controls like input controls, windows, dialogs, panels, menus, views, scrollbars, buttons and many other similar items. Text. Textual guidelines cover tone and style of text to be used on UI. This all boils down to context: A user interface needs to be designed for specific users, goals, and tasks. Guidelines may be a reasonable starting point, but they are only a starting point. The value in UI consistency lies in effective learning, by making it easy to transfer knowledge from another product without interfering with ease of use.
