The broad spectrum of topics covered in the nine symposia and four open-paper sessions of the Third International Wildlife Disease Conference comprise a remarkable collection of ideas and current research information on diseases of wildlife. The term "wildlife" is broad in itself and is interpreted by the Conference sponsor, The Wildlife Disease Association, to mean all free-living vertebrate and invertebrate members of the animal kingdom. The Conference's invitational symposia brought to Munich an array of wildlife specialists from around the world who addressed major problems affecting the understanding and control of diseases of wildlife. The open paper sessions attracted many well-known scientists with detailed data from their specialized studies. Over 100 participants were present to hear 84 scientific papers. The Wildlife Disease Association and the Conference editors, through their publisher, are pleased to offer this compilation of presentations as a Conference Proceedings. This volume will be an important data source for the study of diseases of wildlife by students, specialists, and general biologists everywhere. WDA President W. G. Winkler expresses the Association's gratitude to the Conference Chairman, Prof. Dr. H.

Domestication has often seemed a matter of the distant past, a series of distinct events involving humans and other species that took place long ago. Today, as genetic manipulation continues to break new barriers in scientific and medical research, we appear to be entering an age of biological control. Are we also writing a new chapter in the history of domestication? Where the Wild Things Are Now explores the relevance of domestication for anthropologists and scholars in related fields who are concerned with understanding ongoing change in processes affecting humans as well as other species. From the pet food industry and its critics to salmon farming in Tasmania, the protection of endangered species in Vietnam and the pigeon fanciers who influenced Darwin, Where the Wild Things Are Now provides an urgently needed re-examination of the concept of domestication against the shifting background of relationships between humans, animals and plants.

Free-living birds encounter multiple health hazards brought on by viruses, bacteria, and fungi, some which in turn can significantly impact other animal populations and human health. Newly emerging diseases and new zoonotic forms of older diseases have brought increased global attention to the health of wild bird populations. Recognition and management of these diseases is a high priority for all those involved with wildlife. Infectious Diseases of Wild Birds provides biologists, wildlife managers, wildlife and veterinary health professionals and students with the most comprehensive reference on infectious viral, bacterial and fungal diseases affecting wild birds. Bringing together contributions from an international team of experts, the book offers the most complete information on these diseases, their history, causative agents, significance and population impact. Focusing on more than just treat-

ment, special emphasis is given to disease processes, recognition and epidemiology.

Warfare in the twenty-first century goes well beyond conventional armies and nation-states. In a world of diffuse conflicts taking place across sprawling cities, war has become fragmented and uneven to match its settings. Yet the analysis of failed states, civil war, and state building rarely considers the city, rather than the country, as the terrain of battle. In *Cities at War*, Mary Kaldor and Saskia Sassen assemble an international team of scholars to examine cities as sites of contemporary warfare and insecurity. Reflecting Kaldor's expertise on security cultures and Sassen's perspective on cities and their geographies, they develop new insight into how cities and their residents encounter instability and conflict, as well as the ways in which urban forms provide possibilities for countering violence. Through a series of case studies of cities including Baghdad, Bogotá, Ciudad Juarez, Kabul, and Karachi, the book reveals the unequal distribution of insecurity as well as how urban capabilities might offer resistance and hope. Through analyses of how contemporary forms of identity, inequality, and segregation interact with the built environment, *Cities at*

War explains why and how political violence has become increasingly urbanized. It also points toward the capacity of the city to shape a different kind of urban subjectivity that can serve as a foundation for a more peaceful and equitable future.

Rob Krier is a unique voice in today's architectural discourse through his commitment to developing a relevant and pragmatic theory of architecture based on his own experience and observations of architectural practice and opposed to the easy, abstract theorising so common in contemporary architectural writing. Together with his brother Leon, he has perfected a form of presentation in which the potency of his thinking finds its perfect counterpoint in detailed drawings and sketches which argue his case visually through the power of example. Following the success of his widely acclaimed "Urban Space", a work which looked at the problems of our cities from a historical, theoretical and practical standpoint, Krier now applies his particular, highly influential mode of didactic criticism to contemporary architecture in continuing search for fundamental architectural truths. Architectural Composition is both a theoretical and visual analysis which clearly illustrates the creative process which informs Krier's vision and praxis. The culmination of a lifetime's thought and experience by one of Europe's most important architectural theorists, it is without doubt a major achievement and is a standard work of reference for both students and practising architects. The book, published for the first time in 1988 by Academy Editions in London, has been supported by funds from the Fond zur Förderung der wissenschaftlichen Forschung der Republik Österreich, and it was carried out at Krier's former Institut für Gestaltungslehre at the Technische Universität in Vienna.

This book offers 150 12-lead ECGs and rhythm strips, each with a

clinical case history and question. The full ECG is reproduced and a study of it with the case history should be enough to give an answer. On the back the case is examined, with a description of the main features of the ECG along with a clinical interpretation and a "what to do" section. The cases are graded in difficulty. The unique page size allows presentation of all 12-lead ECGs across a single page for clarity. Several of the cases incorporate chest X-rays and coronary angiograms illustrating the appearances that are associated with various cardiac conditions. All the cases are graded in difficulty and are cross-referenced to the new editions of *ECG Made Easy* and *ECG in Practice* for further information. For this Fourth Edition over 30 new ECGs have been included, mainly to provide clearer examples, though the book deliberately retains some technically poor records to maintain a 'real-world' perspective.

There are not many books in India that can serve as a useful textbook to the students and guides to the practising journalist. It is this lacuna that M.V. Kamath, one of the most prominent Indian Journalists, has tried to fill. This is a book on Indian journalism for Indian journalists, citing examples of Indian writers, Kamath quotes profusely from the writings of Indian editors to illustrate his ideas which considerably adds to the relevance of his work.

A bored chameleon wishes it could be more like all the other animals it sees, but soon decides it would rather just be itself. Cutouts along the edges of the pages display various animals and colors.

A certain intimacy with one's ancestors was essential to achieving status in the classical world. By referring to the illustrious exploits and qualities of his forebears, a man could strengthen his position in society. If his origins lacked sufficient glory, he could construct a family tree and testify to its authenticity through the judicious use of portraits and legendary allusions. In this volume, fifth in the Aarhus Studies in Mediterranean Antiquity, eleven internationally recognised scholars analyse ancestral representation in ancient Greece, Etruria and Rome. While some contributions address the artistic, social and political significance of given portraits, others address broader themes: true and false forefathers in the portraits of Hellenistic rulers, the question of whether women were ancestors in republican Rome, and how the Roman non-elite used funerary statues to acquire an ancestor.

Yet in recent years - largely due to a new self confidence and discovery of Christian faith - Maire has begun to share a testimony that has inspired thousands of fans on both sides of the Atlantic. We follow her life - from idyllic innocent childhood in county Donegal, through the highs and lows of success in the public eye, the personal torment of successive relationship breakdown, and the consequences of promiscuity and drug and alcohol indulgence. Ultimately this is a story of a woman whose dream became a nightmare, and yet throughout the trauma a still small voice continued to whisper her name. In seeking out that voice she finally found her love and security she had craved all her life.
